EFFICIENCY

DIVERSIFIED LABELING SOLUTIONS

CLEAR, ACCURATE BARCODE LABELS

Barcodes are the most efficient and accurate way to store and log data within warehouses. Choose quality barcodes to avoid chargebacks, inaccurate data collection and lost productivity.

LICENSE PLATE LABELS

Sequentially numbered labels attached to moveable units such as cartons, pallets, bins or cases. Allows grouped items to be traced and processed quickly to handle large amounts of inventory.

WRAP AROUND RACK LABELS

Wrap-around labels cover the front and bottom faces of the beam. Used in high or tight areas, these labels make it easier to scan from the ground or multiple directions.

DIVERSIFIED LABELING SOLUTIONS

CLEANBEAM CLEANBEAM

CLEANBEAM™

Warehouses need flexibility to regularly make adjustments to their rack labeling. DLS developed CleanBeam to help warehouse customers quickly remove and replace labels – without scraping.

MOBILE LABELS

Printed on mobile thermal printers, these labels provide flexibility and efficiency gains. Warehouses save time and increase accuracy by printing labels when and where they're needed.

DIVERSIFIED LABELING SOLUTIONS

ON DEMAND LABELS

Thermal printers can be used to print on-site labels for inventory management, shipping labels, product ID, or even tracking parts throughout the manufacturing process.

MULTI-LEVEL RACK LABELS

Consolidate information for multiple levels of shelving to locate inventory more efficiently – without a long-range scanner. Provide additional information with color coding and directional symbols.

RETRO-REFLECTIVE LABELS

Retro-reflective label material is viewable to both scanners and the human eye at a distance. This is perfect for high level racks or hanging signs that need to be scanned from the ground.

SLS
RFID Solutions

RFID LABELS

RFID labels utilize radio waves to automatically track and record data on products as they move within the warehouse and throughout the supply chain.
